

10kv Substation Protection Relay Device in Power System for Distribution Networks AM4 series protection relay is applicable to the user substation which the input voltage is 35kv and below.

The protection relay offers integrated protection functions including two-stage overvoltage and undervoltage protection, two-stage residual overvoltage protection, as well as single-stage negative ...

REX610 is a member of the renowned Relion® protection and control family of relays, building on ABB's strong heritage of freely configurable multifunctional relays and many proven protection algorithms. ...

AM5 series microcomputer protection devices are applicable to the user substation in which the input voltage is 35kv or above.

The relay RPL34Hig allows the monitoring of machines, plants and systems requiring a high voltage isolation. Usable in photovoltaic domain or with continuous current machine.

The WGB-871A protection relays is specifically designed for distribution and utilization scenarios at voltage levels of 10kV and below

Our comprehensive portfolio of protection technology enables reliable grid availability in the voltage ranges of 10 kV to 110 kV. The protective and control devices can be used in, for example, single and ...

Siemens' universal protection relays portfolio includes products such as SIPROTEC 7SX800 and 7SX85 to provide flexibility and cost savings. Our devices cover a wide range of ...

It functions as a low power switch for HV signals up to &#177;10kV, making it an ideal substitute for bulky mechanical HV relays. Its solid state design eliminates the wear and tear throughout its ...

Numerical relays are based on the use of microprocessors. The first numerical relays were released in 1985. A big difference between conventional electromechanical and static relays is how the relays ...
