AI Micro-module Server

AI/ML demands are reshaping servers. Explore how CPUs, GPUs, FPGAs and AI accelerators drive performance for workloads like deep learning and predictive analytics.

AI-accelerated servers are deployed in higher density systems, which is driving the demand for more efficient power delivery throughout the data center.

NVIDIA MGX is a modular server architecture built to power AI, HPC, and cloud-scale workloads. With flexible support for multiple generations of CPUs and GPUs, MGX configurations help streamline ...

AI servers accelerate model training and real-time inference, delivering powerful computing with CPUs, GPUs, and specialized AI accelerators. Their scalable and efficient architecture enables businesses ...

U.S. authorities intensified scrutiny of AI chip supply chains after prosecutors alleged that a Thailand-linked network diverted Super Micro Computer, Inc. SMCI servers containing advanced NVIDIA ...

Super Micro Computer has projected strong fourth-quarter results, exceeding Wall Street expectations. This positive outlook is fueled by high demand for its artificial intelligence servers. The ...

Defining the AI Power Eco-System. Current data center market solutions for artificial intelligence applications deliver power density up to 40 kW per rack. Our goal is to make a power density solution ...

Super Micro Computer projected fiscal fourth-quarter **revenue of $11 billion to $12.5 billion** and **adjusted EPS of $0.65 to $0.79**, beating consensus, Reuters and Economic Times ...

This strategic collaboration is focused on exploring the integration of NANO Nuclear"s advanced microreactor systems with Supermicro"s industry-leading AI server and data center ...

With massive memory and data center-class performance at your desk, the Super AI Station delivers a secure, scalable, plug-and-play compute platform for building autonomous agents locally - free from ...
