

Counting on an anti-drone system for airport is a smart move. These devices can facilitate the detection and jamming of rogue UAVs (Unmanned Aerial Vehicles) and enhance ...

With RFID and BLE beacons, GAO Tek helps airlines and airport staff track baggage seamlessly from check-in to pick-up. RFID tagging provides continuous tracking, ensuring baggage is transferred ...

By incorporating DedroneSensors and other sensors, such as a camera or radar, users can track the flight path of the drone and determine the location of the pilot. Dedrone not only locates the position ...

Discover QUANHOM anti-drone IR systems with advanced infrared technology for accurate drone detection and tracking. Ideal for airport security, campus safety, and commercial areas.

NO-DRONE is an integrated system specifically conceived for detecting, tracking, identifying and classifying cooperative and non-cooperative drones flying in aerodromes and their surroundings.

Enables quick retrieval of both X-ray and physical images at recheck stations, streamlining the verification process. Fully integrated with Baggage Handling Systems (BHS), Screening Systems, ...

Our Airport Anti Drone Systems provide advanced solutions tailored to enhance the safety and security of your airspace. Designed to detect and manage unauthorized drone activities efficiently, these ...

While earlier reviews addressed general counter-UAS techniques, individual sensors, or the detection of single objects such as birds or drones, none has systematically reviewed airport ...

This white paper outlines a modular and effective Anti-Drone System that leverages four key components: Electro-Optical/Infrared (EO/IR) sensors, GPU-based AI computing, rugged military ...

Air Force, Navy & NASA. Available in dual function BDR-DDR configuration for simultaneous bird & drone detection with integrated radar-directed electro-optic, infrared (EOIR) camera system and ...
