

This Substation Relay Protection Training course is recommended for engineers and technicians from utilities or industries who participate in the design, installation, or maintenance of protective relays ...

The objective of this presentation is to convey a basic understanding of protective relays to an audience of engineers already familiar with low voltage protective device coordination.

Comprehensive overview of substation relay protection targets: from generator stator faults to HV motor loss-of-sync and capacitor overvoltage.

This guide outlines some of the principles used in modern substation automation protection systems, as well as some of the underlying theory.

A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor technology protect staff and plant facilities for many years.
