

Under the SPK® brand CeramTec offers a unique program in terms of scope, diversity and performance of indexable inserts made of ceramic cutting materials, CBN, SiC whisker reinforced ceramics and ...

The inserts are designed with multiple cutting edges so they can be rotated after use to reveal a new, sharp edge. Ceramic Turning Inserts | MSC Direct offers quality Turning Inserts at a great value. Find ...

Our Secomax(TM) ceramic insert grades provide optimized wear resistance and toughness when cutting parts from heat-resistant superalloys, such as Inconel, MAR, RENE, Nimonic and Waspaloy, at high ...

This article briefly discusses the differences in their use and the materials they are suitable for processing based on the types and properties of ceramic blades and cubic boron nitride ...

Secure anything from signs to heavy machinery in concrete, brick, and drywall. Choose from our selection of ceramic inserts, including threaded inserts, nuts, and more. Same and Next Day Delivery.

Ceramic inserts are widely used in CNC machining for high-speed cutting and difficult-to-machine materials (e.g., superalloys, hardened steels) due to their exceptional hardness, heat ...

Hones on ceramic inserts are applied for the same reasons that hones are applied on carbide - to protect the edge from microchipping which then leads to uneven heat and stress distributions and ...

Whether your operation is looking to switch to ceramic tools or to replace existing ones, Kennametal offers one-stop shopping. Kennametal ceramic inserts give you precise and true cuts throughout the ...

Ceramic inserts excel in high-speed operations and are well-suited for machining high-temperature alloys, hardened steels, and heat-resistant materials. They typically offer longer tool life than carbide ...

Compared to conventional carbide or high-speed steel (HSS) inserts, ceramic inserts offer unique advantages but also present limitations due to their brittleness.
