

Core switch is prohibited from accessing the Internet

You need also to configure NAT for all internal subnets to allow them access to the Internet. Simply put the configuration on the core switch is correct and complete you need to ...

If issues persist after solving all failed configurations found by using `execute switch-controller diagnose-connection`, open a new support ticket to start an in-depth investigation into the ...

This is likely related to how the vlans are setup with the gateways on the core switch, and the vlan where the mgmt interface is on the edge switch where the device is connected.

A core switch operates at the *italic* core layer *italic* of a hierarchical network design, typically handling a massive volume of data traffic. Its primary function is to rapidly forward data ...

Both firewalls in an A/P HA configuration require access to the internet circuits. The switch is making this happen by splitting the single-handoff ISP connection.

We have configured additional VLAN in our cisco core switches sitting behind PA FW. I want to allow and block internet in certain VLAN, eg VLAN7 to allow and VLAN70 in the switches to ...

The common problem is VLAN 1 can access internet but other VLANs can't access internet, in this case if you apply EIGRP routing in both Cisco router and in cisco layer 3 switch then the router and other ...

We need to connect several switches from other vendor to our BD instead Extreme and in order to monitor them over the cloud, we need to connect them to the Internet.

I also described how apply IP routing in cisco switch and how to apply static routing and dynamic routing (EIGRP) protocol in both Cisco Switch and router for inter VLAN routing and accessing...

Corrected but still no internet access on Core Switch. You can use the "show ip nat" commands on the router to find out what is and is not working. do these tests on the router. After the ...

Core switch is prohibited from accessing the Internet
