

Learn PAM4 modulation, a technique for transmitting data with four signal levels. Explore its 5 advantages and disadvantages in modern communication systems.

The FCC's action is limited to new models of foreign-made, consumer-grade routers. Consumers may continue to use routers they have already acquired, and retailers may continue to ...

In a shocking move, the Federal Communications Commission just banned the sale of any new Wi-Fi routers that are not US-made, citing national security.

Is a router produced in the United States containing foreign-produced components now "covered equipment" and prohibited from FCC equipment authorization? Do applicants need to have ...

Is a router produced in the United States containing foreign-produced components now "covered equipment" and prohibited from FCC equipment ...

The Federal Communications Commission (FCC) recently issued a Public Notice adding foreign-made consumer-grade routers to its Covered List, thereby prohibiting the authorization and ...

The FCC on Monday announced that all consumer-grade routers produced in foreign countries are banned from sale in the United States - unless the supplier applies for and receives a ...

Understand PAM4 signaling basics and how it differs from NRZ. Expert insights on testing challenges, eye diagrams, and validation for 400G/800G Ethernet.

Producers of consumer-grade routers are encouraged to submit an application for Conditional Approval using the guidance attached to the determination. Applications should be submitted to conditional ...

Thanks to its advantages of high transmission efficiency and low costs, PAM4 has been widely used in 50G, single-wavelength 100G, and 400G (non-ZR) optical modules, and plays an ...

Learn how to measure PAM4 signals for high-speed digital networking applications.
