

Custom Process for Remote Monitoring Fiber Optic Adapters for Rail Transit

A hybrid fiber optic sensing system is proposed and investigated in this work using commercial software. The system ensures localization calculation with two different outputs to ...

Rail Engineer recently spoke to Focus Sensors Ltd to learn more about its novel and most promising and exciting Fibre Optic Movement Sensing system (FOMS), which could ...

As part of a successful collaboration with GCF, DIAMOND engineered and supplied the fiber optic connectivity solution integrated into an advanced railway monitoring system.

Are you planning a fiber optic project or would you like to monitor existing routes? We support you with customized solutions, from planning to commissioning. Contact us, we will be happy to advise you.

Our Remote Fiber Test and Monitoring (RFTM) solution brings real-time visibility across the network lifecycle--from rollout to activation and ongoing operation--helping you detect issues ...

Passengers will be able to take advantage of seamless high-speed mobile connections in the future. Fiber optic cables will be laid along the railway lines and new antenna sites will be ...

A hybrid fiber optic sensing system is proposed and investigated in this work using commercial software. The system ensures localization calculation with ...

Our Remote Fiber Test and Monitoring (RFTM) solution brings real-time visibility across the network lifecycle--from rollout to activation and ongoing ...

Discover how AP Sensing's fiber optic tech, like DAS and SmartVision, enhances railway safety, efficiency, and predictive maintenance with real-time data.

PrismaRail enables railroad operators to monitor trains and rail structure accurately for hundreds of kilometers in real-time without installing any additional sensors.

The Somni fibre optic sensor design can be easily extended to cover kilometres of track and additional sensors can be easily added to increase insight into specific parts of the track.
