

Fiber optic photoelectric sensors offer remote sensing/mounting options for long-distance or low- or no-power endpoint applications. Installations can be customized using cuttable fiber optic cables.

These are reliable and easy-to-use devices that have high power, can automatically adjust to real-time conditions, and have a straightforward display that eliminates any guesswork. This series is able to ...

Robust sheath and fiber materials in the fiber-optic cable also offer excellent protection against aggressive chemicals. The sensors are protected in a switching cabinet or at a safe distance, while ...

Mouser offers inventory, pricing, & datasheets for Fiber Optic Sensors.

Ultra-small diameter fibers with a compact head ensure precision centering accuracy to stably detect minute parts. Since it has a thin, rectangular shape, it can be installed in narrow locations. Sensing of ...

When installation space is extremely limited or the objects to be detected are tiny, fiber-optic sensors are the ideal solution.

Equipped with safety features and remote fault monitoring.

The sensor measures how much of the light signal is received versus how much is blocked or distorted, allowing it to detect the presence or absence of an object in its field of view.

These sensors are designed to detect minute color differences, even in transparent objects, and are equipped with advanced features like a built-in polarizing filter to enhance differentiation accuracy.

Used in harsh conditions, high vibration, extreme heat, or explosive environments, Banner offers a variety of glass or plastic fiber optic sensors.
