

Key Finding: Passive Optical Networks have evolved from first-generation GPON systems delivering 2.5 Gbps to cutting-edge 50G-PON implementations in 2025, with 100G Coherent PON ...

Section II presents the evolution of passive optical networks, looking back from the "first-mile" scenario and the line-rate upgrade. Section III discusses the overview of EPON systems, ...

It evaluates the progress and limitations of IM-DD PONs, and presents the drivers for longer reach and higher split coherent PONs. The paper also explores key technology developments and options to ...

A passive optical network (PON) is a point-to-multipoint fiber network architecture that uses optical splitters to deliver high-bandwidth services from a single fiber to multiple end users without requiring ...

A complete and systematic overview of passive optical access networks is presented in this paper, concerning both the hot research topics and the main operative issues about the design ...

Passive optical Networks (PONs) have become a popular fibre access network solution due to its service transparency, cost effectiveness, energy savings, and higher security over other access ...

The passive optical network (PON) has emerged as the dominant broadband access technology globally, owing to its superior bandwidth scalability, cost-effectiveness, and reliability. This paper ...

Comprehensive guide to Passive Optical Network (PON) technology, covering GPON, EPON, XGS-PON, NG-PON2, and future 50G/100G standards. Learn PON architecture, ...

It provides cost-effective, energy efficient network architecture and can be realized in integrated wired/wireless network scenarios for fronthaul/backhaul data transmissions. This paper reviews the ...

A passive optical network (PON) is a shared, fiber optic access network that uses unpowered optical splitters to connect many users to a single OLT. PONs deliver high-speed ...
