

Dimensions and parameters of the quantum communication optical network maintenance toolbox

Quantum communication networks (QCNs) are a game-changer for secure and fast information transfer by using the principles of quantum mechanics to achieve unbreakable encryption ...

By integrating quantum-safe measures at the optical layer, our solution provides a future-proof roadmap for network operators, hardware vendors, and Industry 4.0 stakeholders tasked with ...

We describe a quantum networking architecture which can provide the flexibility and scalability likely to be critical for supporting widespread deployment of quantum applications.

This program will study innovative architectures for quantum optical nodes and networks that will enable co-existence of classical and quantum channels across the network.

Zan Li (China) Dynamic Spectrum Control-Based Covert Integrated Air-Ground Communication Follow

It encompasses the on-chip generation, manipulation, storage, and detection of photonic quantum information, showcased through applications in quantum communication and metrology.

Quantum state transmission is the process in which a transmitter sends a quantum state pulse loaded with key information to the receiver through a quantum channel, such as via optical fibre or free ...

This article presents a detailed account of solutions to the above issues, deployed and evaluated in the MadQCI (Madrid Quantum Communication Infrastructure) testbed.

These modules can be edited by users to define additional functionality and test protocol schemes, or may be used as-is to test network parameters and topologies.

Here we report a proof-of-principle demonstration of an integrated-photonics TF-QKD network with exceptional scalability and reliability. This network includes 20 independent client-side ...
