

Directional Drilling Construction of Communication Optical Cables

Directional boring is a trenchless method of installing dark fiber optic cable underground along a predetermined bore path. The directional drilling system allows for the placement of underground ...

Directional boring is a horizontal drilling process used to install OSP fiber optic cable outside of certain commercial buildings.

Using directional drilling for laying fiber optic cables can be an efficient and effective method, especially in situations where traditional trenching methods are impractical or too disruptive.

Our directional drilling services support the most advanced fiber optic and copper networks in the world. Whether it's direct point-to-point fiber connections or DWDM to accommodate OC-48 or OC-192 ...
