

Experiment Report on Microcomputer Relay Protection for Transmission Lines

----- Abstract - This paper presents the design and operation of the protection of long EHV/UHV transmission line using microcon. roller-based distance relay. The characteristic of a ...

Abstract: According to the requirements and characteristics of performance test in the process of research and development of relay protection device, a general automatic test system for relay ...

EXPERIMENT definition: 1. a test done in order to learn something or to discover if something works or is true: 2. to try.... Learn more.

In the scientific method, an experiment is a set of actions and observations, performed in the context of solving a particular problem or question, to support or falsify a hypothesis or research...

Prepared by Working Group I5 Working Group Assignment presentation of protection and control relaying. The report will identify methodology behind these practices, present issues ...

With the development of economical, powerful and sophisticated microprocessor, ...

The document describes a protection scheme for directional impedance phase relays used to protect parallel transmission lines. The scheme uses four phase relays located near buses 2 and 3 to detect ...

experiment n 1. a test or investigation, esp one planned to provide evidence for or against a hypothesis: a scientific experiment 2. the act of conducting such an investigation or test; experimentation; research

Research on Microcomputer Relay Protection Anti-Interference of 500kV Transmission Line in MATLAB. To read the full-text of this research, you can request a copy directly from the...

In view of the shortcomings of the existing relay protection experimental platform, this paper proposes the design of simulation model based on MATLAB platform and uses the transmission line model to ...

EXPERIMENT definition: a test, trial, or tentative procedure; an act or operation for the purpose of discovering something unknown or of testing a principle, supposition, etc.. See examples of ...

An experiment usually tests a hypothesis, which is an expectation about how a particular process or phenomenon works. However, an experiment may also aim to answer a "what-if" question, without a ...

Experiment Report on Microcomputer Relay Protection for Transmission Lines

This paper established a 500kV microcomputer protection model with EFT/B generator. The generator was built based on the mechanism of arc forming and distinguishing when cutting off the no-load ...

An experiment can be thought of as a specific type of method used in scientific inquiries, and personal questioning, usually to study causality. Often the objective is to test a hypothesis: that is, a tentative ...

By definition, an experiment is a procedure that tests a hypothesis. A hypothesis, in turn, is a prediction of cause and effect or the predicted outcome of changing one factor of a situation.

This paper presents the behaviour of the distance protection relays on a series compensated transmission line under fault conditions. Series compensation presents distance protection elements ...
