

# FTTR New Type of Hot Aisle for Computer Room

Design flexible hot and cold aisle containment systems with Faztek's T-slot aluminum extrusion. Scalable, custom-built solutions for data centers and server rooms.

Hot aisle/cold aisle layout makes sense for the vast majority of new data centers or data center expansions. However, retrofitting an existing data center with a new layout may require downtime ...

Hot aisle containment is made from light duty aluminum profile and thermal insulation PC board, has better heat dissipation performance than cold aisle containment in high density data centers, to ...

Explore hot and cold aisle containment systems, including doors, panels, and ceilings. Improve data center airflow, cooling efficiency, and energy savings with customizable solutions today!

This method encloses the hot air exhaust aisle, preventing it from mixing with cold supply air. It requires a specific ceiling design and is therefore better suited for new builds rather than retrofits.

Aisle containment is a layout design for server racks and other computing equipment in a data center. The goal of a hot or cold aisle configuration is to conserve energy and lower cooling costs by ...

With hot aisle architecture, the supply air is directed onto the front of the racks and the hot discharge air ducted back to the PAC units through the ceiling void; this provides better room temperature control ...

Our integrated hot aisle containment system allows clients to take partial support from containment panels instead of relying completely on the ceiling system near hot aisle areas. This solution helps ...

Hot aisle containment (HAC) can improve cooling efficiency in data centers by over 30% by effectively managing airflow and preventing hot and cold air from mixing. Implementing HAC leads ...

**Door Options** A choice of door options is available for use with the aisle containment system to provide the right combination of safety and security. Dual sliding doors or Vertical doors can be chosen for ...
