

PLC splitters are based on planar lightwave circuit technology, ensuring uniform signal distribution and supporting high split ratios up to 1:64 or even higher. They are ideal for large-scale ...

Passive solution: All-optical network, optical cable and connector for cabling. Using the existing indoor circuit to realize power supply.

• Support for the PoE standard. This option is particularly important for business users who have devices that require remote power, such as APs, IP cameras, and others.

Learn about the critical role of optical splitters, understand different splitting levels and ratios, and discover how to make strategic design decisions to ensure optimal network performance.

The main difference in costs between the two approaches is largely represented by the use of remote DC power (There is no adder to traditional for their AC power needs)

An FTTR/FTTH indoor split device is a managed in-home fiber distribution node that combines splitting/branching with Ethernet/PoE power and telemetry, so each room branch can be monitored ...

Power Over Ethernet splitter adapters are a perfect solution for bringing power to your non-PoE devices without the hefty installation costs. Use these splitters to convert 802.3af/at PoE to 5v, 12v, 15v, 19v, ...

The main FTTR and a sub FTTR are connected using an FTTR ADU, optical splitter and PoF cable. A sub FTTR automatically synchronizes Wi-Fi parameters from the main FTTR.

Traditional telephone services used to receive power from the Central Office, but this is not the case with FTTx solutions. In the event of a power outage at the user's location, they will not be able to use ...

It's an active PoF router that integrates optical splitting + DC power distribution + protection in one device, designed specifically for FTTR indoor PoF-style deployments.
