

How to install an optical flow positioning module

An alternative method which avoids the need to land and change EKF3 parameters between calibration and testing is to setup GPS/Non-GPS transitions so the pilot can manually change between GPS ...

This is detailed tutorial on how to install Optical flow sensor on Drone Fram and wiring diagram on how to connect this sensor to flight controller.

To enable the Holybro PMW3901 optical flow sensor in PX4, simply set `SENS_EN_PMW3901` to enable, and the `SENS_TFLOW_CFG` to the corresponding port that sensor ...

Since `cflib` has a few prerequisites that must be met, refer to the LiteWing Python SDK Programming Guide. That document provides detailed instructions for installing dependencies, setting up `cflib`, ...

Learn how to set up a rangefinder optical flow sensor in iNav for enhanced FPV drone stability in Position and Altitude Hold modes.

Optical Flow uses a downward facing camera and a downward facing distance sensor for velocity estimation. It can be used to determine speed when navigating without GNSS -- in buildings, ...

Here Flow is a finger size optical flow sensor. Compared with other optical flow sensors, it is even smaller. It can be installed easily at any position without taking much space. A LiDAR component, an ...

Setup An Optical Flow setup requires a downward facing camera and a downward facing distance sensor (preferably a LiDAR). These can be combined in a single product, such as the ARK Flow, ...

An Optical Flow setup requires a downward facing camera and a distance sensor (preferably a LiDAR). These can be connected via MAVLink, I2C or any other bus that supports the peripheral.

In order to ensure good optical flow quality, it is important to focus the camera on the PX4Flow to the desired height of flight. To focus the camera, put an object with text on (e. g. a book) and plug in the ...
