

# Integrated power supply for live swapping

The ICT Modular Power Series system provides flexible, managed DC power for a broad range of communications and broadband applications. The foundation is the power shelf and 700W high ...

Next, a hot swap controller is a dedicated device or integrated circuit that manages the insertion and removal of circuit boards (or components) from a live system without interrupting the ...

The MP5048 is a monolithic integrated controller and switch that can be paralleled for higher current applications. The device includes a high-side MOSFET (HS-FET) and circuitry that enable it to ...

Optimize industrial power systems with hot-swap controllers that enable safe live insertion and removal of boards without disrupting operation. They manage inrush current, protect against electrical faults, ...

HOT SWAP POWER SUPPLIES - NNTDM-6HS SERIES 7500W-18KW 12V-48V HOT SWAP, REDUNDANT/PARALLEL OPERATION, NO DOWN TIME, FRONT PANEL DIAGNOSTICS [Read more](#)

Designed with the ability to meet aggressive runtime requirements, Smart-UPS On-Line can be configured with multiple live swappable battery packs that not only enable extended runtime but can ...

Eaton Hot-Swap PDUs offer dual input cords and a manual bypass switch, enabling live-replacement of standard plug-in UPS systems for maintenance without interrupting connected server or networking ...

PMIC - Hot Swap Controllers are semiconductors that provide the in-circuit protection and control features needed to allow other components to be inserted or removed from a circuit while there is live ...

Server & AI Power Systems A complete portfolio of server power solutions for data center, AI compute, cloud storage and network infrastructure applications. All series are available through our qualified ...

Hot swap controllers from Analog Devices perform all the housekeeping functions necessary to hot swap plug-in boards. These parts also integrate with industry-leading converter and amplifier cores for ...
