

SYSTIMAX ULL solutions were created to maximize speed and minimize attenuation with optical performance that goes far beyond the minimum industry standards. In fact, SYSTIMAX ULL solutions ...

In summary, understanding split ratio and insertion loss of optical splitter is vital for optimizing fiber optic networks. The split ratio dictates power distribution among ports, impacting ...

Design and simulation process for a multimode interference (MMI) device based on a silicon nitride platform presented. The objective is to achieve a low-loss MMI model as a beam ...

We present the design and performance of a low-cost, reciprocal, compact free-space terminal employing tip/tilt pointing compensation that enables optical two-way time-frequency transfer over ...

This NanoSpeed™ switch family features ultra-low loss (<1dB), polarization independence, bi-directional, covering wavelength from 500nm to 2000nm, high optical power handling up to 10W, and ...

A new resonator design has now enabled low-loss, non-reciprocal pulse routing based on the Kerr nonlinearity in integrated silicon waveguides.

CommScope's Optical Splitter Modules are part of our value-added module (VAM) system that provides flexibility, scalability and functionality to an optical transport ...

The goal of this work is to develop a grating coupler with a sufficiently low insertion loss and broad bandwidth by using a resonance with unidirectional radiation, namely, a UGR.

Ultra-low-loss fibers with Corning's ColorPro identification technology, our coloring solution, enable cable manufacturers to reduce cost, minimize footprint, and leverage an enhanced product offering.

Loss (IL) and Reflection or Return Loss (RL). A superior connector will exhibit minimal optical loss, thanks to precise alignment of the connected fiber cores and enhanced stability. In essence, the ...

Superior Optical Performance Low loss increases network reach and minimizes the need for amplification. Low return loss minimizes impairments of higher bit rate signals. Low crosstalk ...

Shin-Etsu's optical isolators have very low transmission loss and excellent thermal lens characteristics which are based on new Faraday-rotator materials and ...
