

Manual concentricity test of ceramic ferrule

Our ferrules are characterized by high precision including concentricity which is verified by additional measurements in order to ensure repeatability of the connection and low losses in random connections.

A concentricity tolerance is a cylindrical (or spherical) tolerance zone whose axis (or center point) coincides with the axis (or center point) of the datum feature(s).

This video showcases our self-developed concentricity testing equipment for ceramic ferrules. Watch the precise inspection process in action, ensuring superior alignment accuracy and product quality, ...

KONZENTRIK-V2 FERRULE is dedicated to concentricity measurement of ferrule bore to ferrule envelope. The software indicates the maximum eccentricity angle ...

KONZENTRIK-V2 FERRULE is dedicated to concentricity measurement of ferrule bore to ferrule envelope. The software indicates the maximum eccentricity angle when rotating the ferrule.

High precision Concentricity measurements Konzentrik-V2 is a modular measurement system.

Konzentrik-V2 Ferrule is dedicated to concentricity measurement of ferrule bore to ferrule envelope. The software indicates the max eccentricity angle when rotating the ferrule.

Our ferrules and sleeves are available in standard size and shape configurations. For standard products, please see the following. Kyocera can machine the end face of the ferrule based on the customer's ...

Konzentrik-V2 with ferrule module is dedicated to concentricity measurement of ferrule bore to ferrule envelope. The software indicates the maximum eccentricity ...
