

No response when the pigtail is plugged into the transceiver

If your Traxxas receiver isn't working, check that the RC battery is plugged in all the way and that all the pins inside the plug are in good order. Ensure that the battery has enough power to ...

Use a voltmeter to measure the battery voltage when the transceiver is on and then during transmit. If there is excessive battery voltage drop (greater than 2Vdc) there could be a bad antenna.

Make sure the connector is snapped in all the way. Some cables require a really hard push to snap in that last 1/16 inch. One indication is that the transmitter may be keyed. A slight trimming of the ...

Ask if this is a problem that occurs frequently because of a design deficiency in the transceiver. If the technician thinks that the problem can be fixed, be sure to get a cost estimate.

When I connect my flight controller to BetaFlight it appears as if my transmitter is not connected at all. No response from any transmitter inputs, sticks or auxiliary switches.

This indicates that the RX and TX serial lines have not been connected together with a loopback device (a plug that connects the RX and TX lines of a serial port connector for testing) so the characters ...

Before you begin checking input power, not powering up, but unresponsive, the radio won't... Partial and Full Resets Troubleshooting overview Some a first, does the radio turn on at all or does it remain turned off? If it stays off, you need to back up a step to be sure that the power supply is on and that it has the right output voltage as we discussed in the previous On All Bands article, "Maintaining and Troubleshooting Your Station." If the supply is OK, use an ohmmeter to check any fuses in ... See more on onallbands Manuals Lib JOHNSON 5300 SERIES SERVICE MANUAL Pdf ... Page 206: Display Controller Board TRANSCEIVER NOTE: With dual remote control units, the second control unit is connected REMOTE CONTROL UNIT to J1 on ...

I put my Trickle Charger on the bike and it did not charge. I checked the connection and there is no power from it. The QUESTION is "does the cable go DIRECTLY to the battery harness or ...

Before sending your rig for costly repairs, you can try some basic troubleshooting and simple fixes yourself. Here's a comprehensive guide to help you perform basic repair and ...

When a radio gets moved around or things get disconnected and plugged back in, you might have forgotten to

No response when the pigtail is plugged into the transceiver

reconnect something. It's also very easy to get a cable either partially ...
