

Peruvian eye meter resistant to low temperatures

When the ground temperature is at least one degree cooler than surrounding air (inversion), aerosol droplets tend to drift near the ground within the habitat where the target species is most...

The temperature range of primary interest here is between 4 and 300 K. Except for the case of some thermometers, a sensor that functions at 4 K will usually continue to function at lower temperatures ...

Our Red Eye® water-cut meters provide real-time measurements across the full range of water cut from 0 to 100 percent. Using patented optical-sensor technology, our meters ignore changes in salinity ...

Explore an unrivaled selection of makeup, skincare, hair, fragrance & more from classic & emerging brands.

The advantage of the Red Eye meter is that it can be installed directly at the wellhead prior to separation (i.e., at high GVF). This enables continuous monitoring of water cut for each well.

To ensure consistent and reliable measurement results, calibration procedures must account for temperature fluctuations. Temperature-controlled environments or temperature ...

Certified by MCERTS for measuring turbidity and featuring ABB's innovative adaptive TSS calibration technology, the ATS430 can be counted on to provide improved control of turbidity and suspended ...

Of all accelerated weather resistance test devices, it has the spectral distribution closest to sunlight. Due to its high correlation with outdoor exposure that is close to sunlight, it has become the most ...
