

Yes, CAC is typically paired with raised access floor systems, allowing conditioned air to be supplied directly into the cold aisle from the plenum below. This setup ensures efficient airflow delivery.

The cold aisle containment system encloses the cold aisle and prevents the mixing of cold air with hot exhaust air. This lets hotter air go back to the CRAC units.

Modular sliding or swinging door versions available with optional "soft" self-closing mechanisms and hold-open provisions. Accommodates aisle widths from 36" wide to 96" wide. Standard ...

This air is contained in front of the cabinets, creating a homogeneous air plenum at the desired temperature. This contained cold air helps prevent hot spots and runs through the cabinets cooling ...

Hot aisle containment is made from light duty aluminum profile and thermal insulation PC board, has better heat dissipation performance than cold aisle containment in high density data centers, to ...

By isolating the cold aisle, containment reduces unintended mixing of cold supply air with hot exhaust air, maintaining uniform, predictable temperatures across all racks.

Enhance data center cooling efficiency with this door frame adapter. It easily integrates with existing cold and hot aisle containment system, improving temperature control and overall performance.

Adaptable to hot and cold aisle containment, the Vertiv Aisle Containment system allows you to deploy containment before or after racks are installed to simplify installation and speed deployment of new ...
