RVVP cable is a type of shielded, flexible multi-core control cable specifically designed to transmit low-voltage signals reliably in electrically noisy industrial environments.

The optical fiber cable component (OFCC) consists of an optical fiber with a 900 micron diameter tight buffer, reinforced with aramid yarn and encased in a 2.0 mm flexible zero-halogen jacket.

Description: Includes 8 individual fibers within a single cable. Benefits: Provides the capability for multiple data channels, enabling efficient data distribution and connectivity for various network setups.

Core - At the center of a fiber optic cable is a thin glass tube called a core that transports light pulses generated by a laser or light emitting diode (LED).
