

Site of Tajikistan Cable Tray Seismic Support Factory

To investigate the seismic behavior and failure mechanism of the cable tray, a series of shaking table tests were conducted on a full-scale steel frame with a cable tray system enhanced by ...

This equipment records the velocity and acceleration of seismic waves in the ground and is used for assessing seismic hazards, analyzing the behavior of buildings, designing earthquake ...

The assembly connects the structure such as a beam or ceiling, to a brace member which could be cable, channel, or pipe to a non-structural support, such as pipe, trapeze, cable tray, duct, and more.

FDSN Web Services provide a common data access API for seismic data. Availability based on irisws-fedcatalog service. FDSN is a global organization supporting seismology research.

Tested by an independent lab and stamped by a Professional Engineer, the seismic cable kits are designed to brace non-structural equipment and distribution systems to help minimize damage from ...

Being a country exposed to strong seismicity, the estimation of seismic hazard in Tajikistan is essential for urbanized areas, such as the rapidly ...

Being a country exposed to strong seismicity, the estimation of seismic hazard in Tajikistan is essential for urbanized areas, such as the rapidly growing capital city Dushanbe.

PDF | On Apr 27, 2024, Farkhod Hakimov and others published Assessment of Site Effects and Numerical Modeling of Seismic Ground Motion to Support Seismic Microzonation of Dushanbe City,...

Guidelines are presented here for conducting in-plant seismic ruggedness review of conduit, cable trays, and their support systems. The in-plant review has two purposes.

During the unsettled period following the breakup of the Soviet Union and a decade of civil war in Tajikistan in the 1990s, the GARM station was destroyed and much of the local ...
