

Protect critical components in your power system with a wide range of SEL protective relays covering applications and use cases from low to high-voltage protection.

Our qualified specialists will work with you to find the right protective relay for your unique needs--taking you from design and installation to maintenance, testing, and repairs.

Microprocessor-based solid-state digital protection relays now emulate the original devices, as well as providing types of protection and supervision impractical with electromechanical relays.

Protective relays and devices have been developed over 100 years ago to provide "lastline" of defense for the electrical systems. They are intended to quickly identify a fault and isolate it so the balance of ...

Their evolution has been driven by the need for greater accuracy, speed, and functionality in power system protection. As we look to the future, relay technology will continue to play a critical role in ...

Protection technology is closely tied to the development of power systems, and its importance becomes even more pronounced in PEDGs, where the demands are more critical and complex.

Protection relays have shaped the way engineers approach relay protection and electrical safety. Over time, relay protection has advanced from basic mechanical designs to digital solutions ...

What did selective grid protection look like over 100 years ago? Experience a journey through time from early electromechanical relays to the most modern digital protection and control devices at our stand.

Explore the latest trends in relay protection, including innovations in relay test set technology, the shift to digital relays, and tools like the secondary injection test set. Learn how these ...

A fast and selective arc fault mitigation for air-insulated LV & MV switchgear and Relion protection and control relays and sensor technology protect staff and plant facilities for many years.

In the MV protection relay market, the Swiss government enforces regulations that ensure the safety and reliability of electrical systems. Policies promote the adoption of advanced relay technologies to ...
