

The Role of Fiber Optic Sensors in Railway Tracks

This article reviews the current state-of-the-art of fiber optic sensing/monitoring technologies, including the basic principles of various optical fiber sensors, novel sensing and ...

The Federal Railroad Administration (FRA) sponsored a research team from Oklahoma State University (OSU) to assess how well Optical Fiber Sensors (OFS), specifically Fiber Bragg ...

The optical fiber sensor can detect vibration (dynamic strain change) and static strain change (pressure) along a railway track, detecting intrusion events and their location on the track. Therefore, the central ...

Fiber optic sensors (FOS) enhance structural health monitoring (SHM) of railway infrastructures, providing real-time damage detection. FOS technologies enable long-distance ...

This paper provides a state-of-the-art of optical fiber sensing technologies and their practical application in railway infrastructures. In addition, ...

We pioneer the use of fiber optic vibration sensing to deliver railway insights across multiple disciplines. We monitor track condition, detect trespass and cable security events, and alert ...

In this project, OSU researchers investigated the use of a network of OFSs to continuously monitor key track response parameters at transition zones. In the first phase of this project, researchers ...

In this paper we propose a hybrid fiber optics sensor system, based on Fiber Bragg Gratings (FBG) and Raman distributed temperature sensing (RDTS), for monitoring essential sites ...

This paper provides a state-of-the-art of optical fiber sensing technologies and their practical application in railway infrastructures. In addition, the strain transfer analysis of optical fiber ...

In this scenario, FOS have been proved to be a powerful tool for meticulous assessment of railway systems including train and track behavior by enabling real-time data collection, inspection...

Our chip-based technology utilizes Fiber Bragg Grating (FBG) sensors to enable real-time condition-based monitoring of rail and rolling stock. This enables both infrastructure owners and rolling stock ...
