

The TLV6001 device is part of a family of high-performance general-purpose amplifiers for a wide variety of cost-conscious transimpedance applications, such as smoke detectors.

Our high-bandwidth transimpedance amplifier (TIA) portfolio includes devices with variable gain settings, fast recovery time, internal input protection and fully differential outputs that are optimized for a wide ...

Select from TI's Transimpedance amplifiers family of devices. Transimpedance amplifiers parameters, data sheets, and design resources.

Texas Instruments' OPA857 is a wideband, fast overdrive recovery, fast-settling, ultra-low-noise transimpedance amplifier targeted at photodiode monitoring applications. With selectable ...

Texas Instruments OPA855/OPA855-Q1 Decompensated Transimpedance Amplifiers provide a wideband and low-noise with bipolar inputs ideal for wideband transimpedance and voltage ...

In electronics, a transimpedance amplifier (TIA) is a current to voltage converter, almost exclusively implemented with one or more operational amplifiers (opamps).

Texas Instruments LMH34400 Transimpedance Amplifier is a fixed-gain, single-ended transimpedance amplifier for light detection and ranging (LIDAR) applications and laser distance ...

TI's OPA380 is a Single, High-Speed Precision Transimpedance Amplifier. Find parameters, ordering and quality information

This transimpedance amplifier design is a high-speed, linear, two-stage transimpedance amplifier (TIA) application which uses the LMH5401 fully differential amplifier (FDA).

A transimpedance amplifier (TIA) converts an input current into a proportional voltage, typically using an inverting op-amp with a feedback resistor (R_f). TIAs present a low-impedance input ...
