

Viewing the optical port of a Green switch

The last set of LEDs pulse once in white before indicating the FC port status in green or amber. All functionality pertaining to the green/amber colors for the last 16 LEDs remains the same as the first ...

PROFIBUS OLMs are designed for use in optical PROFIBUS fieldbus networks. They allow the conversion of electrical PROFIBUS interfaces (RS-485 level) into optical PROFIBUS interfaces and ...

The Cisco 9300 indicator lights provide immediate visual feedback on the operational status, port activity, power delivery, and stacking configurations of your Catalyst 9300 switches.

The following is an example of accessing DELL Z9000-ON switch with QSFP-100G-LR4 optical module of Moduletek to show you the specific operation of reading the accessed optical ...

This figure shows the LEDs on for each switch. When you press the Mode button to select the STACK LED, the corresponding port LEDs will blink green for each switch.

Port Green Ethernet Configuration Use the Green Ethernet Configuration page to enable or disable energysaving modes on each port. To display the Green Ethernet Configuration page, click System ...

In this guide, we will explain what optical signal strength is, how to check it on Cisco IOS using the command line, and how to troubleshoot common light level issues.

When working with Extreme EXOS switches, it's often necessary to check the details of the optical transceivers connected to the ports. Here's how you can do it effectively.

This section displays detailed packet information in relation to the selected switch port, including the total, sent, received and rate values for Total, Broadcast, and Multicast traffic.

You can view the status of each port and the statistics of the devices connected to the switch, access the switch configuration, review and modify the configuration, and track how the switch is performing ...
