---

Energy storage batteries are manufactured devices that accept, store, and discharge electrical energy using chemical reactions within the device and that can be recharged to full ...

Our analysis provides a quantitative basis for the value-emission paradox within the global lithium-ion battery supply chain.

This study aims to uncover the static structure of the lithium-related trade network from the perspective of the global supply chain and to simulate the dynamic process of supply chain risk ...

The White House, Department of Energy (through MESC), and other agencies are continuing to engage and coordinate with industry on supply chain challenges through the American Battery Materials ...

Lithium-ion battery (LIB) supply chains encapsulate the profound shift in trade, economic, and climate policy underway in the United States and abroad.

Asia Pacific dominated the lithium-ion battery market with a share of 56.10% in 2025. Li-ion battery, or LIB, is a rechargeable battery used in laptops, cellphones, and hybrid & electric cars.

Using a unique dataset, we assessed capacity, trade, and innovation at four stages of the Li-ion battery supply chain in the U.S. and China.

The total volume of batteries used in the energy sector was over 2 400 gigawatt-hours (GWh) in 2023, a fourfold increase from 2020. In the past five years, over 2 000 GWh of lithium-ion battery capacity ...

Our analysis relied on a bottom-up model that reviewed projected global battery supply in combination with major demand drivers, such as electric vehicles, energy storage applications, and ...
