How much power does a portable power station need?

Small devices like a laptop and coolers tends to need around 60 to 100W of continuous power whereas appliances like fridges can need up to around 800W. So, a large portable power station with a higher output is best for powering large devices, or more devices at once.

What is output power?

Output measures the total continuous power supply a unit can deliver, and is measured in Watts (W). Small devices like a laptop and coolers tends to need around 60 to 100W of continuous power whereas appliances like fridges can need up to around 800W.

How are portable power stations tested?

Every portable power station has undergone comprehensive testing, from comparing capacity and charging times to exploring ruggedness and IP ratings. And, of course, my team has taken each unit off-grid to see how they handle real-world use.
