Wind and solar are set to lead U.S. power generation growth for the next two years following new renewable energy installations, Energy Information Administration (EIA) said on Tuesday.

In this, the 2023 edition of this report, we present new estimates of the technical potential for land-based wind and solar photovoltaics (PV) for the contiguous United States (CONUS). We also provide cost ...

This dataset contains time-series data for analyzing and predicting wind and solar power generation. The data comes from wind farms and photovoltaic power plants in a certain location, ...

Renewable sources--wind, solar, hydro, biomass, and geothermal--accounted for 22% of generation, or 874 billion kWh, last year. Annual renewable power generation surpassed nuclear ...

Electricity generation from solar and wind, measured in terawatt-hours.

Compare Wind And Solar power generation by country with 2024 data and environmental impact.

The extra layer of scrutiny for wind and solar contrasts with actions by the Trump administration to make it easier and cheaper for companies to produce oil, coal, gas and nuclear power.

Next Generation Wind and Solar Power (Full Report) - Analysis and key findings. A report by the International Energy Agency.

We will compare the two energy generation technologies on cost, efficiency, applicability and environmental impact. Wind and solar technologies demonstrate remarkable cost-efficiency ...

Solar and wind accounted for 91% of new US electrical generating capacity added in the H1 2025, according to data just released by the Federal Energy Regulatory Commission (FERC), ...
